Letter of Recommendation

It is my great pleasure to present you with a letter of recommendation for

Vladislav Budiak (born 06-03-2003)

During his Bachelor program at Eindhoven University of Technology (TU/e), Vladislav participated in the **Honors Track of the TU/e Honors Academy: SensUs Organization.**

The TU/e Honors Academy offers ambitious students the opportunity to achieve personal excellence by creating their own challenges and by focusing on their personal and professional development in an interdisciplinary setting. Within their chosen Honors Track students can opt for a focus on science-for-science, science-for-industry or science-for-society. They do their Honors work on top of their regular second and third-year Bachelor program.

The students in SensUs Organization learn how to organize this large international competition with high professional standards; how to take initiative and assume responsibility; how to work together and be creative and innovative; how to develop structured and transparent ways of working; how to reach out to a large audience and involve companies, healthcare organizations, and patients; how to analyze biomaterials and develop biosensor testing schemes; and how to make all aspects come together in a smashing contest week in the first week of September each academic year.

Personal text from the coach: "Vladislav Budiak was a member of the SensUs Organization track in the Honors Academy, first in the Technology department in 2022/2023, in the Events department in 2023/2024, and in both years he was part of the Digital project group. SensUs is the annual international student competition in the field of sensors for health, organized by students of Eindhoven University of Technology, for students from universities from all over the globe. Vladislav had many contributions, such as developing the SensUs wiki-page about the biomarker, the biosensor testing criteria, the theme proposal for the next year, the sample preparations, partner sessions, innovations in the SensUs website, organization of the SensUs events, etc. Vladislav entered the SensUs track because he wanted to learn about collaborations and communications. He has implemented these learning

goals in several ways and has improved his skills in a very effective manner. We thank Vladislav for his dedication and his many contributions to SensUs.”

In short, the fact that Vladislav has successfully combined the two-year Honors program with his regular Bachelor program at the Department of Mathematics and Computer Science shows that he is an excellent and motivated student. I am delighted to recommend Vladislav for your program.

Yours sincerely,

Dr. René van Donkelaar
Dean of the TU/e Honors Academy
